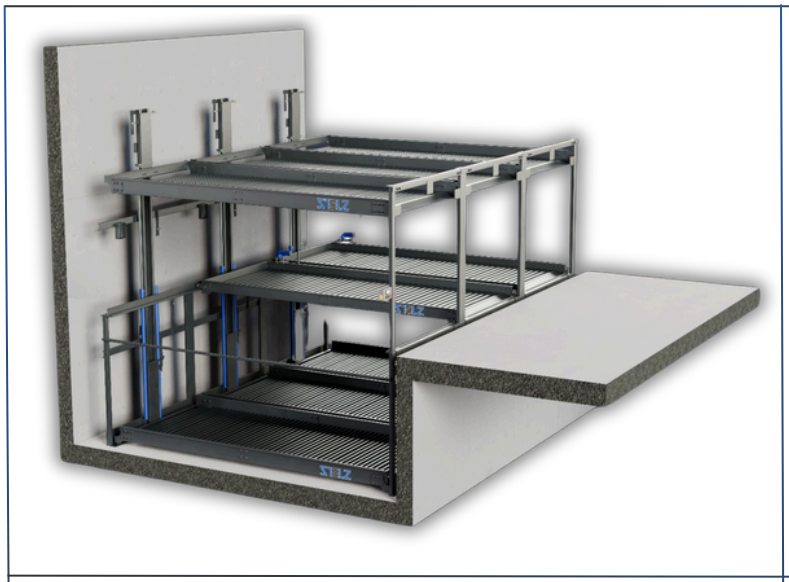
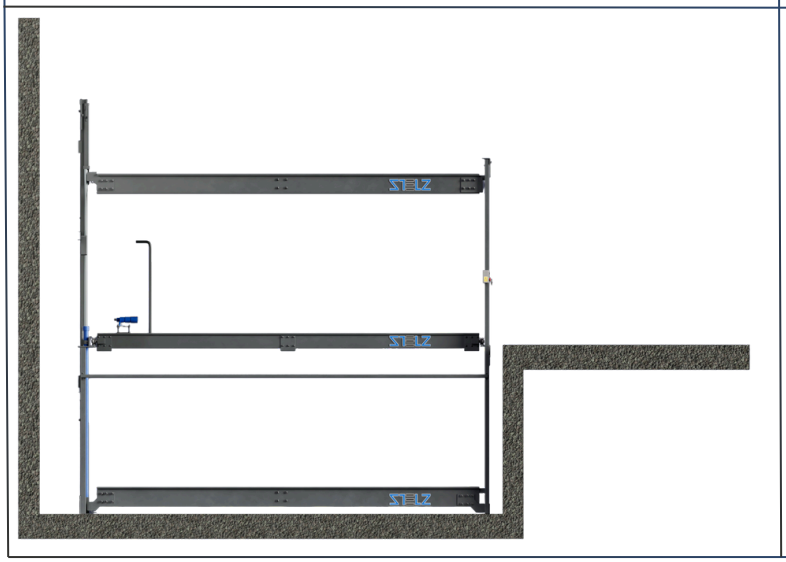
Elevate to Park

THREE-LEVEL PIT PUZZLE PARKING SYSTEMS | PP-02.

The 3-Level Pit Puzzle Parking System is a high-density, fully automated parking solution built to squeeze maximum capacity out of limited real estate. It uses a three-tier pit-and-deck layout where platforms move both vertically and horizontally, allowing any vehicle to be retrieved independently without shifting others.
Designed for basements, premium residential projects, commercial buildings, and high-value urban plots, this system delivers significantly higher car capacity per module based on the grid configuration.
Powered by PLC–HMI controls, hydraulic lifting mechanisms, and mechanical shuttles, it offers smooth operation, strong reliability, and low maintenance demands. This is a compact, efficient, and future-ready solution for locations where every square foot matters. — *a future-forward solution for modern parking challenges.*





Key Features:

- Saves Spaces
- Maximize Parking Spaces
- Easy Maintenance
- Increased Vehicle Security
- Automation & Mechanization
- Safety Sensors
- Customizable for Different Needs

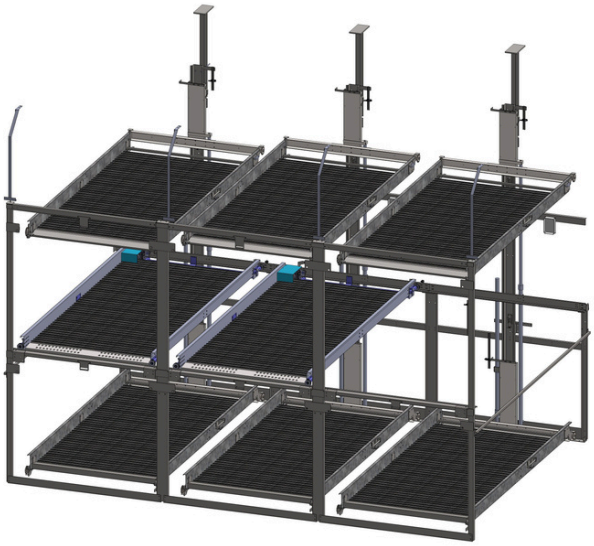
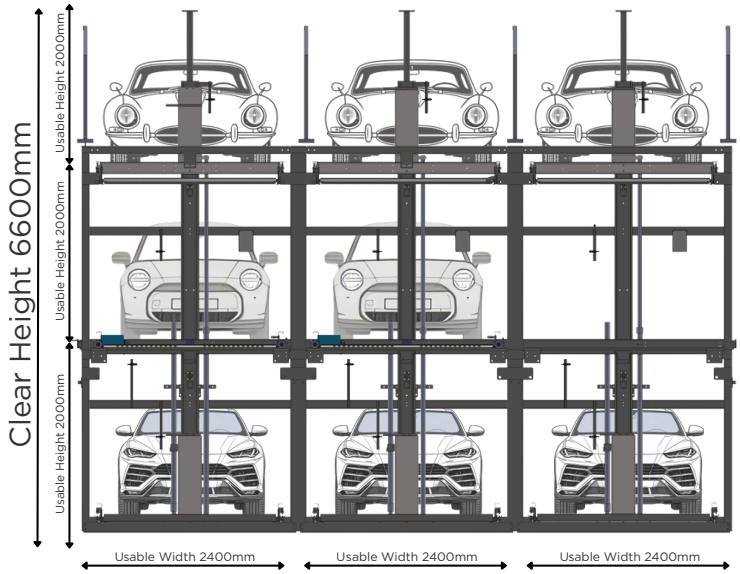
Dimensions, Technical Details, and Performance Metrics

Puzzle Position:



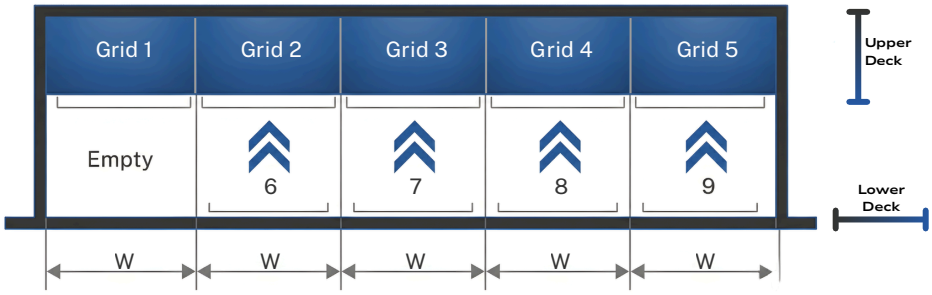


Vertical Clearance:

REGULAR TYPE HEIGHT - SINGLE GRID	HATCHBACK + SEDAN + SEDAN	TALLBOY + TALLBOY + SEDAN	SEDAN + SUV + SUV	SUV + SUV +SUV
CAR HEIGHT UPPER LEVEL	1750mm	1800mm	2000mm	2300mm
CAR HEIGHT MIDDLE LEVEL	1750mm	1800mm	2000mm	2300mm
CAR HEIGHT PIT LEVEL	1750mm	1800mm	2000mm	2300mm
TOTAL HEIGHT:	5850mm	6000mm	6600mm	7500mm

The above-mentioned height represents the clear height required for system installation, inclusive of the buffer space.

Clear Width:



CLEAR SPACE REQUIRED TO INSTALL SYSTEMS	USABLE PLATFORM WIDTH (MIDDLE)	USABLE PLATFORM WIDTH (PIT & UPPER)
2550mm	2100mm	2200mm
2650mm	2200mm	2300mm
2750mm	2300mm	2400mm
2850mm	2400mm	2500mm

The usable platform width for the surface level can be made same as upper and pit level upon customized request.

An entrance/exit is mandatory for every grid.

Parking Slot Length:

Three-level pit puzzle car parking systems might require a minimum length in the range of 4.5 to 5 meters for the platform itself, the actual installation length, including necessary clearances and pit requirements, will often be closer to 5.2 to 5.5 meters (or more for longer vehicles) as advised by STELZ experts.

- Typical Platform Lengths:
- Small Cars: 4000 mm
- Medium Sedans: 4500 mm
- Large Cars/SUVs: 4500 mm - 5000 mm
- Maximum Car Length on System: Up to 4900 mm.
- Civil Area Length: Often specified around 5400-5500 mm.
