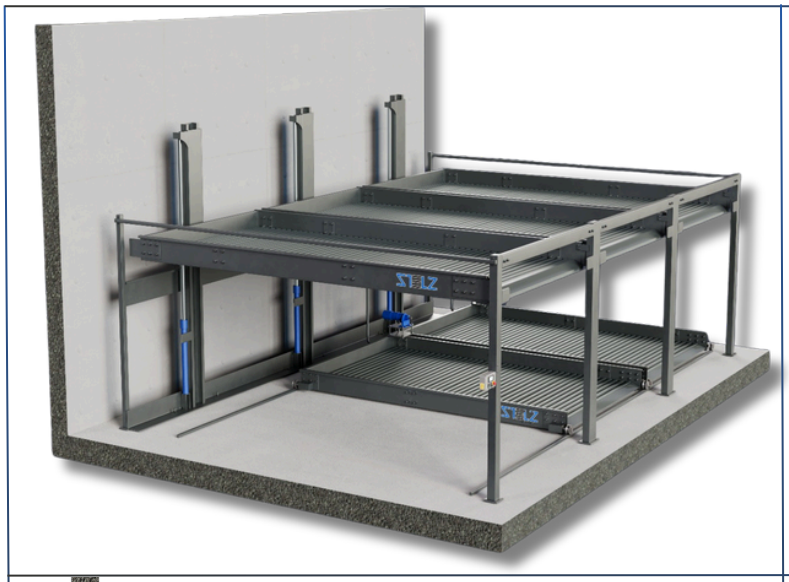
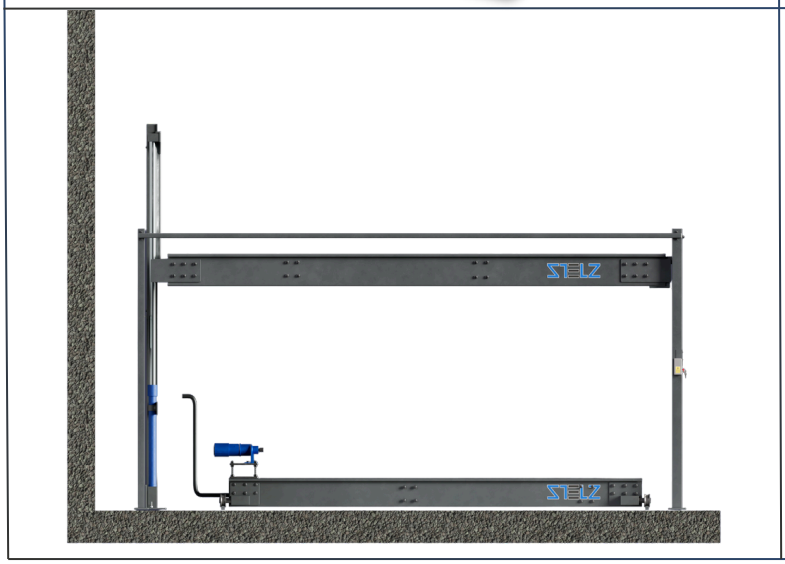
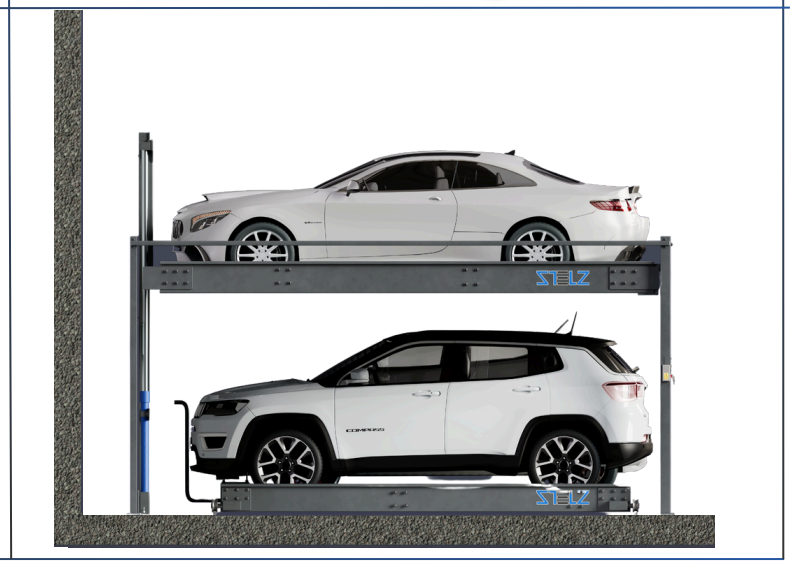
Elevate to Park

TWO-LEVEL PUZZLE PARKING SYSTEMS | P-01.

A Two-level puzzle parking system is a semi-automatic, space-optimizing solution designed to efficiently park multiple cars in a compact footprint. It features a grid of horizontal and vertical platforms that move independently like a puzzle, allowing easy access to parked vehicles without shifting others. This system can accommodate twice the number of cars in the same area as conventional parking and is ideal for residential complexes, commercial buildings, hotels, and office spaces. Designed for both flexibility and functionality, it supports a wide range of car sizes including sedans and SUVs. With minimal civil work and fast installation, it's a preferred choice for urban projects with space constraints. The system is equipped with sensors, safety locks, and overload protection to ensure smooth and secure operation. Built using durable, low-maintenance components, it offers long-term reliability and operational efficiency. Customizable to site-specific requirements, it can be integrated seamlessly into new or existing structures. A 2-level puzzle parking system is the perfect blend of smart engineering and urban practicality — *a future-forward solution for modern parking challenges.*







Key Features:

- Saves Spaces
- Maximize Parking Spaces
- Easy Maintenance
- Increased Vehicle Security
- Automation & Mechanization
- Safety Sensors
- Customizable for Different Needs

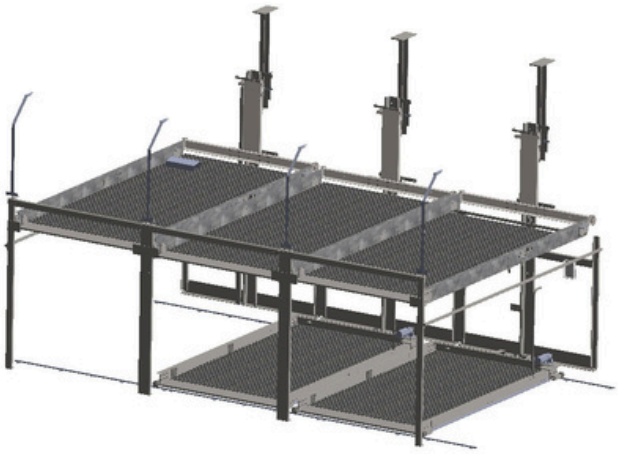
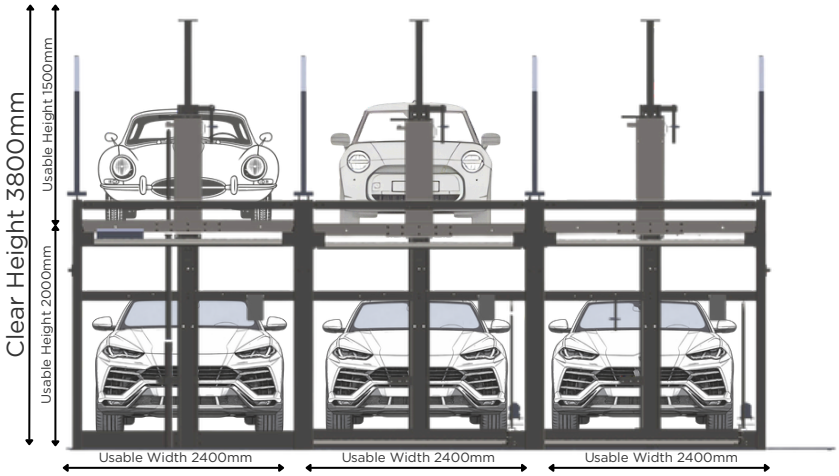
Dimensions, Technical Details, and Performance Metrics

Puzzle Position:



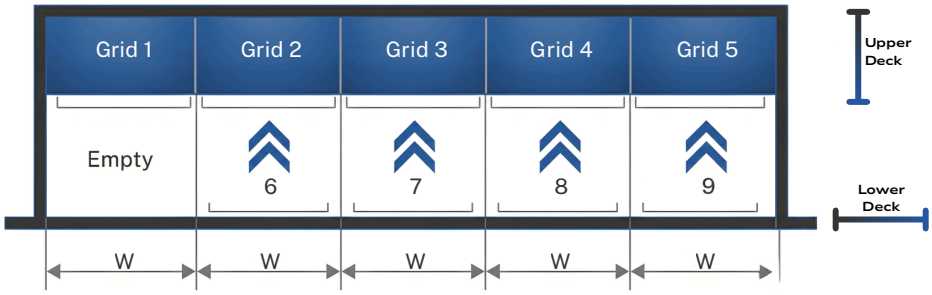


Vertical Clearance:

REGULAR TYPE HEIGHT - SINGLE GRID	HATCHBACK + SEDAN	TALLBOY + SEDAN	SEDAN + SUV	HATCHBACK + SUV	TALLBOY + SUV	SUV + SUV
CAR HEIGHT UPPER LEVEL	1700mm	1700mm	2000mm	2000mm	2000mm	2000mm
CAR HEIGHT LOWER LEVEL	1600mm	1700mm	1500mm	1600mm	1700mm	2000mm
TOTAL HEIGHT:	3600mm	3700mm	3800mm	3900mm	4000mm	4300mm

The above-mentioned height represents the clear height required for system installation, inclusive of the buffer space.

Clear Width:



An entrance/exit is mandatory for every grid.

CLEAR SPACE REQUIRED TO INSTALL SYSTEMS	USABLE PLATFORM WIDTH
2400mm	2100mm
2500mm	2200mm
2600mm	2300mm
2700mm	2400mm
2800mm	2500mm

Parking Slot Length:

Two-level puzzle car parking systems might require a minimum length in the range of 4.5 to 5 meters for the platform itself, the actual installation length, including necessary clearances and pit requirements, will often be closer to 5.2 to 5.5 meters (or more for longer vehicles) as advised by STELZ experts.

- Typical Platform Lengths:
- Small Cars: 4000 mm
- Medium Sedans: 4500 mm
- Large Cars/SUVs: 4500 mm - 5000 mm
- Maximum Car Length on System: Up to 4900 mm.
- Civil Area Length: Often specified around 5400-5500 mm.
