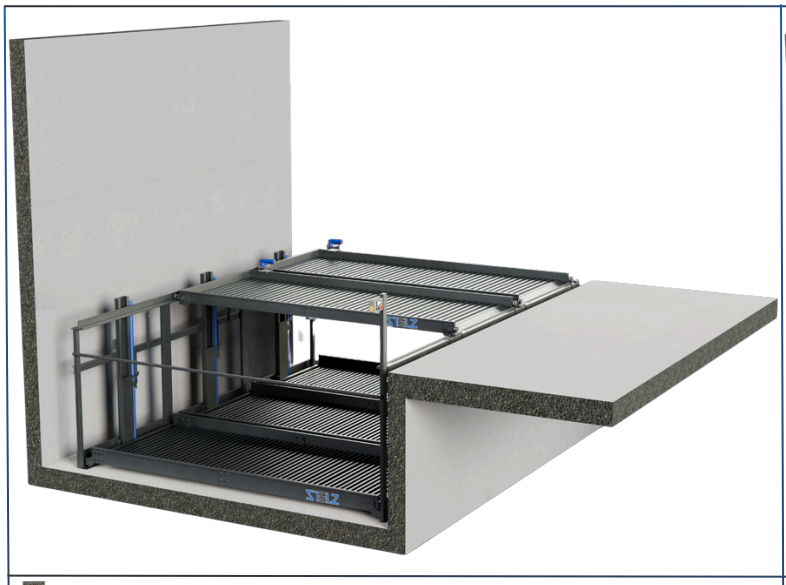
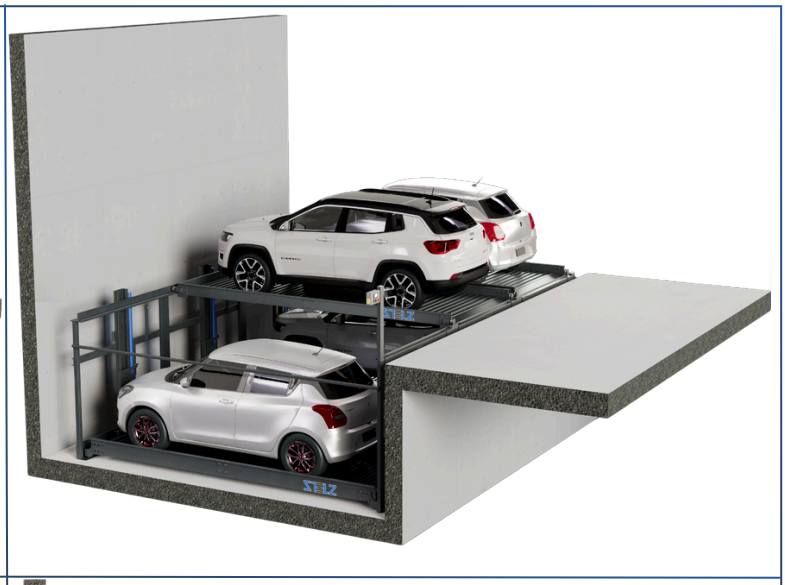
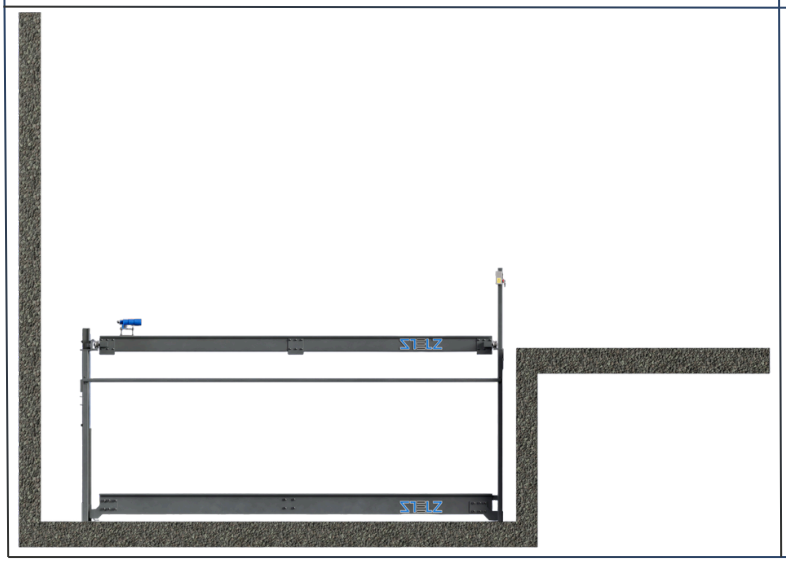
Elevate to Park

TWO-LEVEL PIT PUZZLE PARKING SYSTEMS | PP-01.

The 2-Level Pit Puzzle Parking System is a fully automated solution designed to maximize parking efficiency in limited spaces. It consists of a pit at the ground level and an upper deck above it, allowing cars to be parked one above the other in a puzzle-like arrangement. Vehicles move both vertically and horizontally within the grid, making it possible to access any car independently without shifting others. This system is ideal for basements, residential complexes, commercial spaces, and areas where land costs are high. It offers a capacity of multiple cars per module, depending on the grid size. The operation is controlled via PLC and HMI for smooth and safe movement. With hydraulic lifts and mechanical shuttles, the system ensures reliability and low maintenance. It is a space-saving, premium, and highly efficient parking solution for modern urban environments. — *a future-forward solution for modern parking challenges.*







Key Features:

- Saves Spaces
- Maximize Parking Spaces
- Easy Maintenance
- Increased Vehicle Security
- Automation & Mechanization
- Safety Sensors
- Customizable for Different Needs

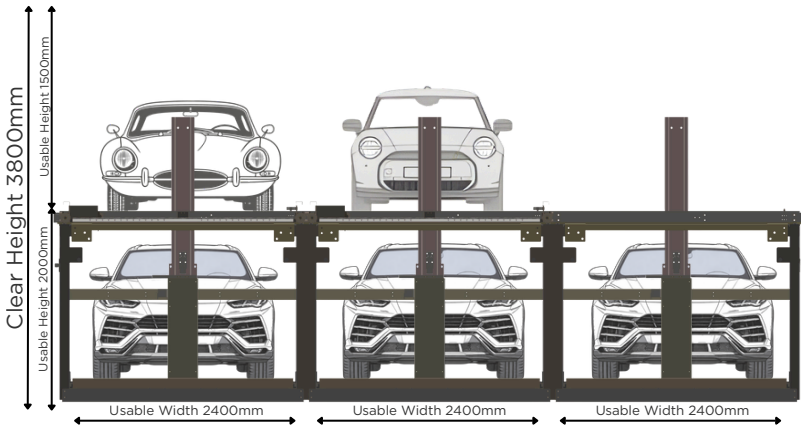
Dimensions, Technical Details, and Performance Metrics

Puzzle Position:

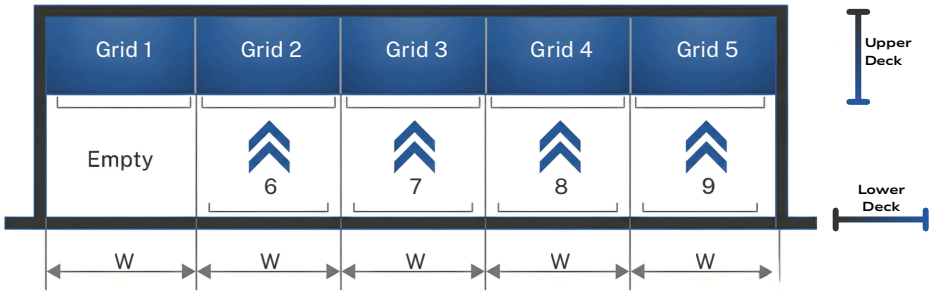


Vertical Clearance:

REGULAR TYPE HEIGHT - SINGLE GRID	HATCHBACK + SEDAN	TALLBOY + SEDAN	SEDAN + SUV	HATCHBACK + SUV	TALLBOY + SUV	SUV + SUV
CAR HEIGHT UPPER LEVEL	1700mm	1700mm	2000mm	2000mm	2000mm	2000mm
CAR HEIGHT PIT LEVEL	1600mm	1700mm	1500mm	1600mm	1700mm	2000mm
TOTAL HEIGHT:	3600mm	3700mm	3800mm	3900mm	4000mm	4300mm

The above-mentioned height represents the clear height required for system installation, inclusive of the buffer space.

Clear Width:



An entrance/exit is mandatory for every grid.

CLEAR SPACE REQUIRED TO INSTALL SYSTEMS	USABLE PLATFORM WIDTH
2400mm	2100mm
2500mm	2200mm
2600mm	2300mm
2700mm	2400mm
2800mm	2500mm

Parking Slot Length:

Two-level pit puzzle car parking systems might require a minimum length in the range of 4.5 to 5 meters for the platform itself, the actual installation length, including necessary clearances and pit requirements, will often be closer to 5.2 to 5.5 meters (or more for longer vehicles) as advised by STELZ experts.

- Typical Platform Lengths:
- Small Cars: 4000 mm
- Medium Sedans: 4500 mm
- Large Cars/SUVs: 4500 mm - 5000 mm
- Maximum Car Length on System: Up to 4900 mm.
- Civil Area Length: Often specified around 5400-5500 mm.
